Condusiv Technologies

Condusiv Technologies creates high-performance software that optimises and maintains application performance and efficiency, extends equipment longevity to make technology, people and businesses more productive. From the moment Condusiv software is installed on physical or virtual systems, the technology ensures data performance is automatically optimised. Requiring zero overhead, our energy-efficient, "Set It and Forget It"® solutions are used by over 90% of the Fortune 500 and almost three-quarters of The Forbes Global 100.

Faster Application Performance — No Additional Hardware
V-locity® is an I/O reduction and caching software solution that increases application performance in virtual, physical and cloud environments by 50% or more without the cost of additional hardware. By optimizing I/O at the Windows OS level (virtual or physical server)—as close to the application as possible—V-locity dramatically reduces the number of I/Os required for any given workload, thus reducing latency and increasing bandwidth from server to network to storage... read more »

Everyone knows the frustration of a Windows® laptop or workstation becoming progressively slower over time. Condusiv’s Diskeeper® 12 Professional prevents degradation in Windows performance by eliminating nearly all fragmentation from occurring at the Windows OS level, before files are written in a performance-penalized state. With its patented, proactive IntelliWrite® technology, Diskeeper keeps laptops and workstations running like new, resulting in increased productivity and lower costs by extending the useful life of existing hardware. IT professionals who support a fleet of laptops will no longer wrestle with persistent performance HelpDesk calls... read more »

Undelete 10 Server provides enterprise level, real time file protection and allows files deleted anywhere in the network to be recovered instantly. It can even recover older, saved over versions of Microsoft Word, Excel and PowerPoint files! Undelete Server delivers centralized management to easily extend your file recovery infrastructure across a distributed environment and remote offices so your server and desktop data protection is easily managed from a central office as your business grows. Efficiently manage Windows systems through a single system. Overall, Undelete 10 is designed to readily optimize any Windows data protection strategy – helping you protect more data in less time – overall saving you time and money. Also includes 10 Desktop Client licenses. This specialized edition empowers users to recover their own deleted or saved over Microsoft Office files from server Recovery Bins without even having to call the Help Desk... read more »

Undelete 10 Professional provides real time data protection with a powerful Recovery Bin that safeguards files stored on workstations and laptops. Even if users store most of their files on the server, there’s always some data stored on the local machines. Undelete allows deleted files to be recovered instantly in the same state they were at the exact time they were deleted. Administrators using the Undelete Server can even connect to those machines running Undelete Professional to browse and recover deleted files remotely... read more »
